高频面试题之CSS3-flex布局常见面试题

如何实现内容宽度等分

```
//html
<div class="box">
    <div style="background: red;">html5</div>
    <div style="background: yellow;">css3</div>
    <div style="background: blue;">js</div>
</div>

//css
.box {
   display: flex;
}
.box div {
   flex:1;
}
```

html5	css3	js

左右布局，一侧定宽，另一侧自适应

```
//html
<div class="box">
    <div class="left">html5</div>
    <div class="right">css3</div>
</div>

//css
.box {
  display: flex;
}

.box .left {
       300px;
       background: red;

.box .right {
```

```
    flex: 1;
    background: yellow;
}
```
